NoteShare App

Aug 2024 - Present

 Associated with SRM IST Chennai

Noteshare is an iOS application tailored to meet the needs of students, enabling them to upload, share, store, and organize notes effortlessly. Designed to foster collaboration and simplify study workflows, Noteshare focuses on providing an intuitive platform where students can contribute and access handwritten notes, making learning more accessible and organized.

I am developing Noteshare from scratch in Swift as part of my training at the iOS Development Center at SRMIST, where I am honing my skills in mobile application development. This project involves end-to-end app development, including:

Conceptualization: Understanding the pain points faced by students when managing notes and brainstorming solutions.

UI/UX Design: Crafting a user-friendly interface that resonates with students, ensuring easy navigation and accessibility.

Development in Swift: Using Swift, Storyboard, and UIKit for building robust features like note uploads, categorization, search functionality, and seamless sharing options.

Testing & Optimization: Continuously testing the app for performance, debugging issues, and refining features to deliver an efficient and polished product.

Through this project, I am not only applying the theoretical concepts I've learned but also gaining practical experience in real-world app development. By integrating efficient data handling, user-centered design principles, and interactive features, I aim to make Noteshare a reliable companion for students in their academic journey.

 Figma (Software), Swift (Programming Language) and +1 skill
